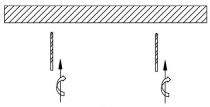
MS30
Ultra Thin
Series

Ultra thin magnetic track lighting system is easy to install and doesn't require any false ceiling , slim design of 5mm thick track can be easily mounted on any hard surface like wooden and concrete style, Light modules are compact with sufficient power.smart light modules options are available to create ambiance according to mood. Available in Black and White body colours options.

Installation Instruction for ULTRA THIN MAGNETIC TRACK

Step 01



A

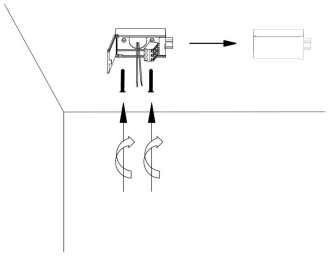
B

Drill proper holes on the ceiling in the size which is according to the expansion pipe. In addition,the position of the holes should according to the holes on junction box, and the reserved wire should be in the middle of the holes.

Remark:If the reserved wire can not be in the beginning of the track,it can also be conduct under the iron bracket to the junction box.

Put the expansion pipe in the drilled hole

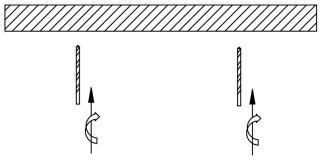
Step 02



Open the junction box and pull the wire out through the big hole of the junction box then fix the junction box on the ceiling by twisting the self-tapping screws through the holes of the box into the expansion pipes.Later connect the wire to the terminal and close the box.

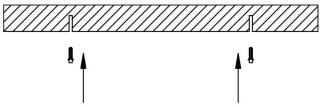
Remark:1.While connecting,please ensure the electricity of the wire is off. 2.The yellow one in the middle of the terminal is for earth,another two for N&L. 3.The junction box is in the beginning and will be in same line with the first track

Step 03



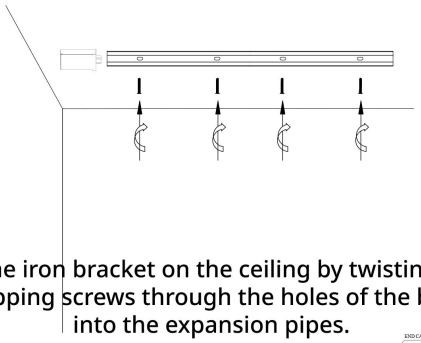
Drill proper holes on the ceiling in the size which is according to the expansion pipe. In addition,the position of the holes should according to the holes on iron bracket, and the first track should be in line with the junction box.

Step 04



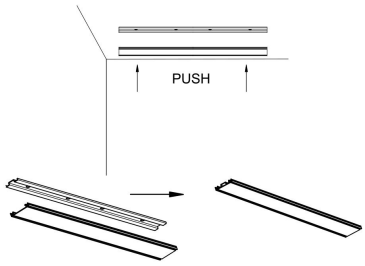
Put the expansion pipe in the drilled holes.

Step 05



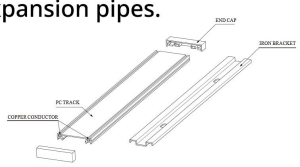
Fix the iron bracket on the ceiling by twisting the self-tapping screws through the holes of the bracket into the expansion pipes.

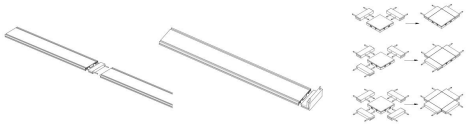
Step 06



Fix the pc track on the iron bracket by pushing .

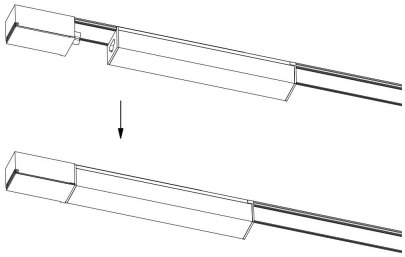
Step 07





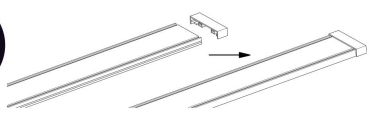
In order to make long version or different shapes of tracks,insert the pin of the connectors in the hole under the copper conductor.Straight connect, ‘in’ corner and ‘L’‘T’&‘+’shape corners are all available in the same way, .

Step 08



Put the power supply on the track and connect to the junction box,make sure it’s connected well.

Step 09



Fix the end cap into the last track .

Step 10

Check and confirm if all the connections of the tracks are proper, finally give the electricity and then install the lights.
